

EDUCATION

BE – CSE

Chandigarh University: 2021 – 2025
CGPA: 8.3

SKILLS

Languages: Python, C++,
TypeScript, JavaScript, SQL

Test Automation: Playwright, Page
Object Model (POM), UI/E2E
Testing, Cross-Browser Testing,
Network Interception, Parallel
Execution

API & Data Testing: REST, SOAP,
Swagger/OpenAPI, Postman,
SoapUI, SQL Validation, JSON/XML

CI/CD & Tools: Git, GitHub Actions,
Linux, Defect Tracking, Agile

CERTIFICATIONS

- PCEP Certified: Python Institute** – Entry-Level Python Programmer
- Coursera** – IBM Generative AI Fundamentals
- Coursera** – NoSQL, Big Data, and Spark Foundations

ACHIEVEMENTS

- Product Hunt:** RetroTerminal ranked #8 Product of the Day with 2,300+ visitors from around the globe
- NPTEL Top Learner:** Social Networks (AIR 13)
- Research Publication:** Breast Cancer Detection using ML (CRC Press, 2024)

PROFILE

Quality Analyst with 1 year of experience across ~6 CTRM energy trading products, covering REST/SOAP API, SQL, regression, and impact analysis testing. Independently built a Playwright + TypeScript E2E suite using the Page Object Model and GitHub Actions CI. Creator of RetroTerminal, ranked #8 Product of the Day on Product Hunt.

EXPERIENCE

Sep 2025 – Sep 2026

OATI, Mohali

Associate Quality Analyst

- Tested ~6 energy trading and transmission products, including westTTrans, CAISO OMS, and webSmartScheduler, across functional, regression, GUI, API, database, and automation testing.
- Validated REST and SOAP APIs using Postman and SoapUI, including status codes, JSON/XML payloads, and error handling.
- Wrote SQL queries to validate data consistency across UI, API, and database layers; performed impact analysis and patch testing for urgent releases to identify regressions before deployment.
- Verified developer fixes before sign-off, blocking failed changes from progressing and reducing rework by attaching clear evidence to every rejection.
- Identified and raised defects beyond assigned scope, including scenario-specific issues missed during manual regression.
- Designed and executed test cases for new features, regression cycles, and defect fixes, covering edge cases beyond documented requirements.

PROJECTS

Playwright E2E Suite | Playwright, TypeScript, UI & API Automation |
github.com/Param2596/playwright-e2e-suite

- Built cross-browser UI/API automation with Playwright + TypeScript, POM, custom fixtures, storageState, network interception, and GitHub Actions CI.
- Automated menu, reset, and checkout flows, validating calculation logic and API responses; built a rule-based test failure summarizer.

RetroTerminal | HTML, CSS, JavaScript, Gemini API, Serverless |
iristerminal.vercel.app

- Built a chat interface for modern LLMs in an old-school terminal: three distinct personas (Iris, Luna, Syntra), dark/neon/glitch themes, serverless API routing.
- Chat history saved locally, with optional bring-your-own API key. Solo-built and launched.

FireStick PC Remote | Python, Android & Windows |
github.com/Param2596/firestick-pc-remote

- Built an end-to-end system using a Fire TV Stick remote as a wireless Windows PC controller, supporting keyboard, mouse, media, and volume controls.
- Developed the Windows tray app and Android/ADB bridge with multiple control modes, key-repeat handling, connection recovery, and automated setup.
